Patent No. US20020168711A1

GENERAL INFORMATION:

APPLICANT: Rosen et al.

TITLE OF INVENTION: Nucleic Acids, Proteins, and Antibodies
FILE REFERENCE: PT232

CURRENT APPLICATION NUMBER: US/09/764,868

CURRENT FILING DATE: 2001-01-77

Prior application data removed - refer to PALM or file wrapper

NUMBER OF SEQ ID NOS: 1510

SOFTWARE: PatentIn Ver. 2.0

Sequence 1, Application US/09817198A

Sequence 1, Application US/09817198A

Patent No. US20020146758A1

GENERAL INFORMATION:
TITLE OF INVENTION: ISOLATED HUMAN RAS-LIKE PROTEINS,
TITLE OF INVENTION: NUCLEIC ACID MOLECULES ENCODING THESE HUMAN RAS-LIKE
TITLE OF INVENTION: PROTEINS, AND USES THEREOF
TITLE OF INVENTION: PROTEINS, AND USES THEREOF
FILE REFERENCE: CL001188

CURRENT APPLICATION NUMBER: US/09/817,198A

CURRENT FILING DATE: 2001-03-27

NUMBER OF SEQ ID NOS: 33

SOFTWARE: FastSEQ for Windows Version 4.0

LENGTH: 3257

TYPE: DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                         260
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    320

patent No. US20020151681A1

GENERAL INFORMATION:

APPLICANT: Craig Rosen,

TITLE OF INVENTION: Nucleic Acids, Proteins and Antibodies

FILE REFERENCE: PA101

CURRENT APPLICATION NUMBER: US/09/925,300

CURRENT APPLICATION NUMBER: DCT/US00/05988

PRIOR APPLICATION NUMBER: PCT/US00/05988

PRIOR FILING DATE: 2001-08-10

PRIOR FILING DATE: 1999-03-12

NUMBER OF SEQ ID NOS: 1890

SOFTWARE: PatentIN Ver. 2.0

SEQ ID NO 631

LENGTHAN: 1537
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      197 GluGlyLysProGluGlyProAlaAsnSerSerLysThrCysTrp 211

Sequence 896, Application US/09834975

Sequence 896, Application US/09834975

Patent No. US20020110815A1

GENERAL INFORMATION:

APPLICANT: Lillie, James

APPLICANT: Bolt, Andrew

APPLICANT: Bolt, Andrew

APPLICANT: Van Huffel, Christophe

TITLE OF INVENTION: NOVEL GENES, COMPOSITIONS AND METHODS

TITLE OF INVENTION: POR THE IDENTIFICATION, ASSESSMENT, PREVENTION, AND THERAPY

TITLE OF INVENTION: OF HUMAN CANCERS

TITLE REPRESENCE: MRI-016B

CURRENT APPLICATION NUMBER: US/09/834,975

CURRENT FILING DATE: 2001-04-13

PRIOR PILING DATE: 2000-04-14

NUMBER OF SEQ ID NOS: 1046

SOCTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 896

4: pir4:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A;Title: A small rab GTPase is distributed in cytoplasmic vesicles in non polarized cell A;Reference number: A49647; MUID:94124602; PMID:8294494
A;Accession: B49647
A;Status: nucleic acid sequence not shown
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A MOLECULE TYPE: MENA

A; Residues: 175-186 < 0.09s.

A; Residues: 175-186 < 0.09s.

C; Superfamily: ras transforming protein; translation elongation factor Tu homology

C; Keywords: GTP binding; lipoprotein; membrane trafficking; nucleotide binding; P-loop;

E; 9-124/Domain: translation elongation factor Tu homology < ETU>

F; 15-22/Region: uncleotide-binding metif A (P-loop)

F; 15-1124/Region: GTP-binding NKXD motif

F; 151-153/Region: GTP-binding SAK/L motif

F; 204/Binding site: geranyl-geranyl (Cys) (covalent) #status predicted

-1. Biol. Chem. 267:22693-222693(1992).
-1. FUNCTION: May act in concert with RAB3A in regulating aspects of spraptic vesicle membrane flow within the nerve terminal.
-1. TISSUE SPECIFICITY: Expressed predominantly in neural tissues.
-1. TISSUE SPECIFICITY: Expressed predominantly in neural tissues.
-1. SIMILARITY: Belongs to the small GTPase superfamily. Rab family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0; Gaps

"RAB GTPases expressed in human melanoma cells.";
Biochim. Biophys. Acta 1355:1-6(1997).
-!- FUNCTION: May be involved in vesicular trafficking and
neurotransmitter release (By similarity).
-!- SIMILARITY: Belongs to the small GTPase superfamily. Rab family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1; Gaps

TROPICALIS_SEQUENCE ID: TEB9119f07.plkSP6

Sequencing primer: SP6

This sequence is from a Xenopus Gene Collection (XGC) library

CONSTRUCTED Agron M. Zorn.

CDNA was oligo dT primed from Sug of poly A+ RNA from egg.

ECORI-NOIL cut cDNA was then ligated into pCS107 with ECORI at the

S' end and Noil at the 3' end.

Vector: pCS107; Site 1: ECORI; Site_2: NotI

Host: Escherichia coli XL1-blue.
